

ERA Finds 12% Savings in Energy for School Association

Project Information

Industry - Education

Category - Electricity

Category Spend - \$650,000

Savings - 12 %

Our Expertise

ERA consultants reviewed detailed electricity data from twelve months of usage at each individual account as well as auditing the client's electricity bills.

ERA then took the client's total electricity requirement to market based on optimum tariff structures.

The client elected to switch their electricity retailer to achieve savings of 12%. The new arrangements also provided with electronic billing and a simplified monthly invoicing cycle.

The Client

A privately-owned provider of education services in WA invited Expense Reduction Analysts (ERA) to review its electricity expenditure.

The client operates a number of Christian education schools and colleges mostly in the metropolitan Perth area.

The client wanted to achieve lower costs and make sure that it was receiving the best value available to it in the energy market.

Our Commitment

Over a two-year project period ERA audited all invoices, provided individual account usage profile reports and advice as well as acting as the client's energy consultant.

As a result of their satisfaction with these services, the client chose to renew ERA's engagement for a further two-year period.
